

The Condition of STEM 2016

ACT has been a leader in measuring college and career readiness trends for over 55 years. Each August, ACT releases *The Condition of College & Career Readiness*, our annual report on the progress of the ACT-tested graduating class relative to college readiness. Nationally, a record 64% of the 2016 graduating class took the ACT® test. The continued increase in the number of ACT test takers enhances the breadth and depth of our data pool, providing a comprehensive picture of the current college readiness levels of the graduating class as well as offering a glimpse of the emerging general and STEM (Science, Technology, Engineering, Math) education pipeline in the United States.

This report reviews the graduating class in the context of STEM-related fields. ACT is uniquely positioned to deliver this report for two key reasons. First is our commitment to science through the inclusion of a science test in our assessments. ACT leadership is unmatched in providing a definitive assessment in the science area. Second is the research-based ACT Interest Inventory, which is completed by ACT-tested students and measures their interest in a wide range of educational and occupational fields.

With answers to the ACT Interest Inventory and responses to the Student Profile Section of the ACT, we can determine interest levels (both expressed and measured) in specific STEM fields. We can then assess college readiness in math and science among STEM-interested students using ACT test scores. Students with an expressed interest are those who chose a major or occupation (out of the 294 possibilities listed) that is classified as a STEM field. Students are designated to have a measured interest when their responses to the ACT Interest Inventory items result in high science and technology interest scores.

Interest Inventory

Validity evidence for this two-factor model of identifying STEM interest was provided in an ACT research study (Crouse, Harmston, & Radunzel, 2016). Figure 1 highlights some of the findings. Those students who were identified as having expressed and measured STEM interest were the most likely to pursue a STEM major, regardless of where they were in their college experience. Those students were also the most likely to graduate with a STEM major. When compared to students with an expressed and measured interest in STEM, students who were identified as having expressed-only or measured-only STEM interest had lower rates of pursuing and graduating with STEM majors while students who had no STEM interest had the lowest rates of all groups. Overall, the results suggest the ACT method for identifying STEM-interested students is valid and can be helpful for predicting whether students will pursue and graduate with STEM-related majors in college.

First-Term STEM Major

The ACT Definition of STEM

To create our STEM categories, we used our list of occupations and majors to define four key areas: Science, Computer Science and Mathematics, Medical and Health, and Engineering and Technology. This report will show achievement levels and trend data in each of those areas on a national level. In addition, the actual number and percentage of students interested in specific majors and occupations are provided. As the percentage of high school graduates taking the ACT continues to grow, these data present an excellent opportunity for state officials to document success of STEM initiatives within their state in an attempt to meet the goal of generating interest and more thoroughly preparing students for STEM fields.

Key Findings

from the National Condition of STEM 2016 Report

- Students with an interest in STEM continue to show higher levels of college readiness than ACT-tested students as a whole.
- Approximately half of ACT-tested US graduates in the class of 2016 have expressed interest in STEM majors and careers. The level of interest has stayed steady over the last five years.
- Average ACT math scores have stayed flat between 2012 and 2016 for students meeting the ACT STEM Benchmark. In contrast, the average ACT science score has gone up among those meeting the ACT STEM Benchmark over the same timeframe. The scores steadily increased from 27.9 to 28.6 since 2012 (see Table 1.6 of the 2016 national ACT profile report at: www.act.org/research/np16).
- Over 1 million ACT-tested students demonstrated an interest in STEM in the 2016 graduating class.
- Only 1,258 students out of the nearly 2.1 million tested students—less than 1% of the total—had an expressed and measured interest in teaching math or science.
- Students demonstrating only one type of STEM interest, either expressed or measured, fall far short in terms of benchmark attainment and preparedness for STEM majors and careers when compared to peers who have both expressed and measured interest.
- Underserved learners have a high interest in STEM, but ACT STEM Benchmark attainment lags far behind
 their peers, especially for those students with more than one of the underserved characteristics used in this
 report.

ACT STEM Benchmark

To provide students and educators with more insight into the critical aspects of college readiness, ACT introduced a STEM score on ACT student score reports in fall 2015. This score is derived from the ACT mathematics and science scores and represents students' overall performance in these subject areas. For the 2016–17 academic year, students, parents, and educators will also note that the ACT College Readiness Benchmark in STEM has been added to the ACT score report. The ACT STEM Benchmark is based on recent research indicating that academic readiness for students pursuing a STEM major may require higher scores than the current ACT College Readiness Benchmarks in math and science (Mattern, Radunzel, & Westrick, 2015).

The ACT STEM Benchmark was developed using the same methodology as each single subject area ACT College Readiness Benchmark. Typical grades in first-year college STEM courses (calculus, general biology, general chemistry, and physics) were combined in a single course success model to determine the ACT STEM score associated with a 50% chance of earning a B or higher and about a 75% chance of earning a C or higher in those courses. The resulting ACT STEM Benchmark is 26. Based on that benchmark, only 20% of students in the 2016 ACT-tested high school graduating class were ready for first-year STEM college courses.

ACT STEM scores are related not only to succeeding in individual math and science courses, but also to achieving longer-term outcomes. Mattern et al. (2015) showed that students pursuing STEM majors who met the ACT STEM Benchmark were more likely to earn a cumulative grade point average of 3.0 or higher, persist in a STEM major, and earn a STEM-related bachelor's degree than those who failed to meet the benchmark. Additionally, ongoing research suggests that providing STEM readiness information to prospective students may help to facilitate the transition to college by aligning students' expectations with course demands.

Attainment of College and Career Readiness

Overall STEM Interest

 Between 2012 and 2016, the percent of students interested in STEM stayed the same.

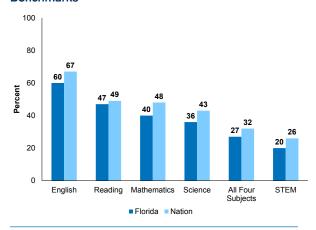

Student STEM Interest Trends: 2012-2016, State vs. National

Understanding the Underserved Learner

ACT Benchmark Attainment

In 2013, ACT expanded its *Condition of College & Career Readiness* series to include a special report focused on students who indicated an interest in STEM-related fields. For the past three years, the *Condition of STEM* reports have provided a comprehensive picture of the college readiness levels of those students. To further advance STEM readiness and to honor its commitments to help underserved learners pursue their college and career goals, ACT is providing additional information on the status of underserved ACT-tested graduates in relation to STEM preparation. Historically, access to quality education and career planning opportunities and resources has been hindered for underserved learners. Identifying these students and determining their readiness in math and science could provide them with more opportunities to successfully enter STEM careers and help address the national deficit of skilled STEM workers.

Definition of Underserved Learners

ACT identifies underserved learners using student characteristics that are often related to a lack of access to high-quality educational and career planning opportunities and resources. Specifically, this definition encompasses students who have at least one of the following characteristics.

- Minority: race/ethnicity is African American, American Indian/Alaska Native, Hispanic/Latino, or Native Hawaiian/other Pacific Islander
- Low income: combined parental income is less than or equal to \$36,000
- First generation in college: highest parental education level is high school diploma or less

This definition, which is consistent with that used in current research activities and state/federal intervention programs, casts a wide net. We have elected to maintain this broad definition as a means of representing most underserved students.

Impact

As shown in the accompanying graphs, the three characteristics used by ACT to define underserved students appear to have a cumulative suppressing effect on college readiness. In other words, the greater the number of characteristics students have, the lower their math, science, and STEM benchmark attainment rates. In isolation, embodiment of at least one underserved characteristic is associated with lower benchmark attainment rates than STEM students nationwide. Students with one underserved characteristic show STEM readiness rates 24 percentage points lower than those with no characteristics. Among students who met two characteristics, STEM readiness rates dropped another 9 percentage points to 6 percent. Among students exhibiting all three underserved characteristics, only 3 percent met the ACT STEM Benchmark.

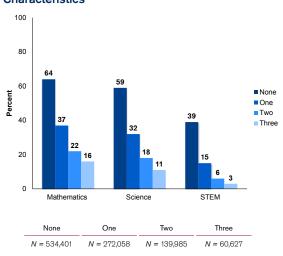

These findings suggest that in order to best help underserved students succeed in STEM-related subjects and fields, we need to better understand the relationships among the defining characteristics and remove the barriers that they create alone and in combination with each other. Working together to remove these barriers is critical to the future success of these students.

ACT Research

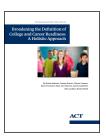

As a nonprofit educational research organization, ACT is committed to producing research that focuses on key issues in education and workforce development. Our goal is to serve as a data resource. We strive to provide policymakers with the information they need to inform education and workforce development policy and to give educators the tools they need to lead more students toward college and career success. What follows are some recent and groundbreaking ACT research studies related to STEM. To review these studies, go to www.act.org/research/summary

ACT National Curriculum Survey[®]

The ACT National Curriculum Survey is a nationwide survey of educational practices and expectations. Conducted every three to five years by ACT, the

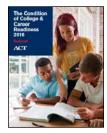

survey collects data about what entering college students should know and be able to do to be ready for college-level coursework in English, math, reading, and science.

Broadening the Definition of College and Career Readiness: A Holistic Approach

The Condition of College & Career Readiness 2016 revealed that only 26% of 2016 ACT-tested high school graduates met all four ACT

College Readiness Benchmarks. A more holistic approach to college and career readiness is in order. This report provides evidence that educators, policymakers, and employers embrace a wide variety of skills critical for success. The research also shows that we can improve prediction of college and career readiness by measuring a broader range of skills.

The Condition of College & Career Readiness 2016

Using ACT scores and the ACT College Readiness Benchmarks, The Condition of College & Career Readiness 2016 provides data highlighting the college and career

readiness of the ACT-tested high school class of 2016. This report is updated annually.

The Condition of Future **Educators 2015**

Data from past ACT Condition of STEM reports have shown there are few students interested in math or science education as a profession. This report provides

current educators and policymakers a glimpse inside the pipeline of future educators.

Development of STEM Readiness Benchmarks to Assist Educational and Career **Decision Making**

The United States must seek ways to maintain the STEM pipeline with students who are likely to succeed

in a STEM major and persist in a STEM field. The purpose of this ACT research was to develop a STEM readiness benchmark to provide prospective students more tailored information on the level of knowledge and skills needed to have a reasonable chance of success in first-year STEM courses.

STEM Resources

ACT has connected with state STEM councils across the country to identify valuable STEM-related resources. These are the top resources suggested by STEM experts.

STEM Premier®

STEM Premier is a virtual platform that connects STEM students with higher education and the workforce. Students can showcase their skills, get ranked and rated, receive guidance, and find STEM scholarships while colleges, technical schools, and corporations can identify, track, and recruit STEM Premier talent.

www.stempremier.com

STEMconnector®

STEMconnector®

STEMconnector is the "one-stop shop" for STEM information. With several products and services, STEMconnector supports its members in the design,

implementation, and measurement of their STEM strategies. Since its launch in 2011, STEMconnector has been the leader in leveraging a network of STEM stakeholders to "make things happen." STEMconnector's charge is to identify, inform, and connect entities working in STEM education and careers to assess smart STEM investments and results.

www.stemconnector.org

USA Science and Engineering Festival

The USA Science and Engineering Festival attracts thousands of K–12 students, parents, teachers, and STEM

professionals in the largest national celebration of STEM. The conference will be held in Spring 2018 in Washington, DC.

www.usasciencefestival.org

Twomentor, LLC

Twomentor, LLC, is a social impact company focused on talent strategies for retaining a diverse workforce. It works with clients to build mentoring cultures and initiatives, and its people have a passion for elevating girls and women in STEM skills. It has experience working with many *Fortune* 500 companies and SMBs and offers facilitated and highly engaging half-day and full-day mentor training, flash mentoring interactive sessions, ongoing MentorCulture consulting, and supports an engaged and passionate workforce as an extended part of your team.

www.twomentor.com

Learning Blade®

From the creators of ACT KeyTrain®, Learning Blade® is an interactive, web-based STEM curriculum validated by BattelleEd in increasing student interest toward STEM careers for middle schoolers. Students pursue engaging missions about real-world STEM problems in an entertaining, game-based platform while also learning about STEM careers, aligned to academic standards. An easy-to-implement, cost-effective STEM tool, Learning Blade has been adopted statewide in two states and is used in over 25 states.

www.learningblade.com

USNews.com

The U.S. News STEM Solutions National Leadership Conference is focused on improving America's science, technology, engineering, and math skills. As a digital company committed to covering STEM through in-depth reporting, research, and analysis, U.S. News & World Report will bring the sixth annual leadership conference to the Sheraton San Diego Hotel & Marina on May 24–26, 2017. For more information, visit www.usnewsstemsolutions.com. For ongoing STEM news and analysis, visit www.usnews.com/STEM.

ACT's Commitment to STEM

Everyone must work together to get more students prepared to succeed in STEM careers. This is a critical step if the United States is to remain a world leader. ACT is committed to research and assessment practices that make enhanced STEM opportunities for students a reality. Although gains have been made in STEM readiness, the data show that far too many STEM-interested students are still not well prepared to succeed in the type of rigorous college math and science coursework required of STEM majors. ACT research indicates that students who meet or surpass the ACT STEM Benchmark are much more likely than those who don't to persevere in college and earn a STEM degree within six years.

ACT recently developed the ACT Aspire® assessment system, focused on grades 3–10. ACT Aspire covers the same subjects as the ACT: English, reading, math, science, and writing. To complement the information in the STEM report, an ACT Aspire STEM score has been developed. This score gives educators and STEM leaders an early and ongoing view of the STEM pipeline within their states.

ACT WorkKeys® and the ACT National Career Readiness Certificate™ are additional assessment tools available to students, individuals, and companies to assist in determining work readiness for STEM-related jobs.

Notes

- 1. When individuals register for the ACT, they are asked to choose a college major they plan to enter as well as an occupational choice from a list of 294 major and occupational titles. Of these 294 titles, 93 have been identified as STEM related. Assignment of ACT titles to STEM titles was conducted by an expert panel of ACT staff members with knowledge of labor market trends and postsecondary academic programs. Panel decisions were informed by three sources of information: (1) STEM-designated occupations from the US Bureau of Labor Statistics (BLS), (2) STEM-designated degree programs from US Immigration and Customs Enforcement (ICE), and (3) ACT Interest Inventory score profiles for students planning to enter the major/occupation. ACT titles were assigned to STEM when both the corresponding BLS and ICE titles were included in STEM or when the corresponding BLS title was included in STEM and the profile of measured interests of students planning to enter this occupation peaked on the Science and Technology scale. These two guidelines accounted for 89 of the 93 ACT titles assigned to STEM. The remaining four titles were assigned to STEM based on the judged intensiveness of their math and science coursework (major) or work tasks (occupation). ACT titles in the Social Sciences were excluded from this STEM list because many STEM taxonomies do not include majors and occupations in this field.
- Students were assigned to one of three STEM cohorts: Expressed and Measured, Expressed Only, or Measured Only. These cohorts were based on the pairing of Expressed and Measured STEM interest types, where:
 - Students with expressed STEM interest planned on a STEM major or occupation following high school.
 - Students with measured STEM interest had a highest ACT Interest Inventory score in Science or had a highest ACT Interest Inventory score in Technology and a second-highest score in Science.

Within each STEM cohort, students were also assigned to one of four STEM areas: Science, Computer Science and Mathematics, Medical and Health, or Engineering and Technology. STEM areas for students in the Expressed and Measured Interest cohort and the Expressed Interest Only cohort were based on the STEM area of students' planned major. If planned major was not STEM, then the STEM area of their planned occupation was used. For students in the Measured Interest Only cohort, STEM area was based on the correlation of ACT Interest Inventory scores and the interest profile of the planned major. Using a national sample of 2-year students in their second year and 4-year students in their third year who have a declared major and a grade point average of at least 2.0 (N=62,494), each major's profile was estimated as the mean ACT Interest Inventory scores for students in that major.

ACT is an independent, nonprofit organization that provides assessment, research, information, and program management services in the broad areas of education and workforce development. Each year, we serve millions of people in high schools, colleges, professional associations, businesses, and government agencies, nationally and internationally. Though designed to meet a wide array of needs, all ACT programs and services have one guiding purpose—helping people achieve education and workplace success.
